Mobile Application Development

L04: Introduction to iOS

Jonathan Diehl (Informatik 10)

Hendrik Thüs (Informatik 9)

The iOS Device Family

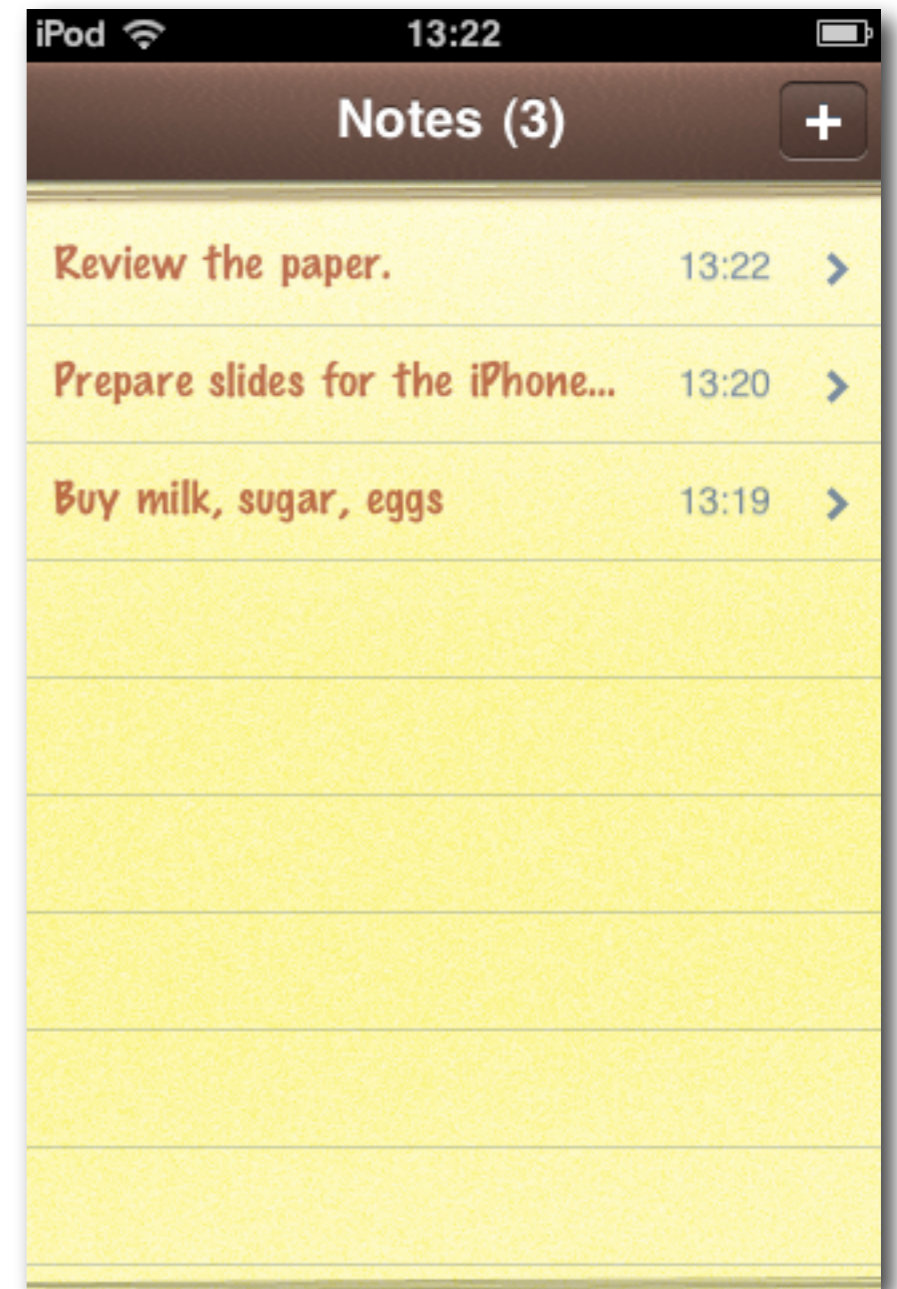

Mobile Device Characteristics

- Screen size is compact
- Memory is limited
- Users interact with one screen at a time
- Users interact with one application at a time
- Onscreen help is minimal
- *Context is key (task focus, peripheral use)*

Life as an App

- The iOS is an app-centric environment
 - One app per task
 - One task per app
- Data is stored per app
 - No common file system
 - Data exchange only via sharing

Designing the UI

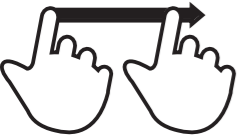

- Make it obvious how to use your application
- Display information incrementally and succinctly
- Sort information from top to bottom
- Minimize text input
- Provide fingertip-size targets

Direct Touch Interaction

- Multitouch interaction is still new
- Interaction patterns are not established yet
- Follow the standards
- If you need complex gestures, guide the user

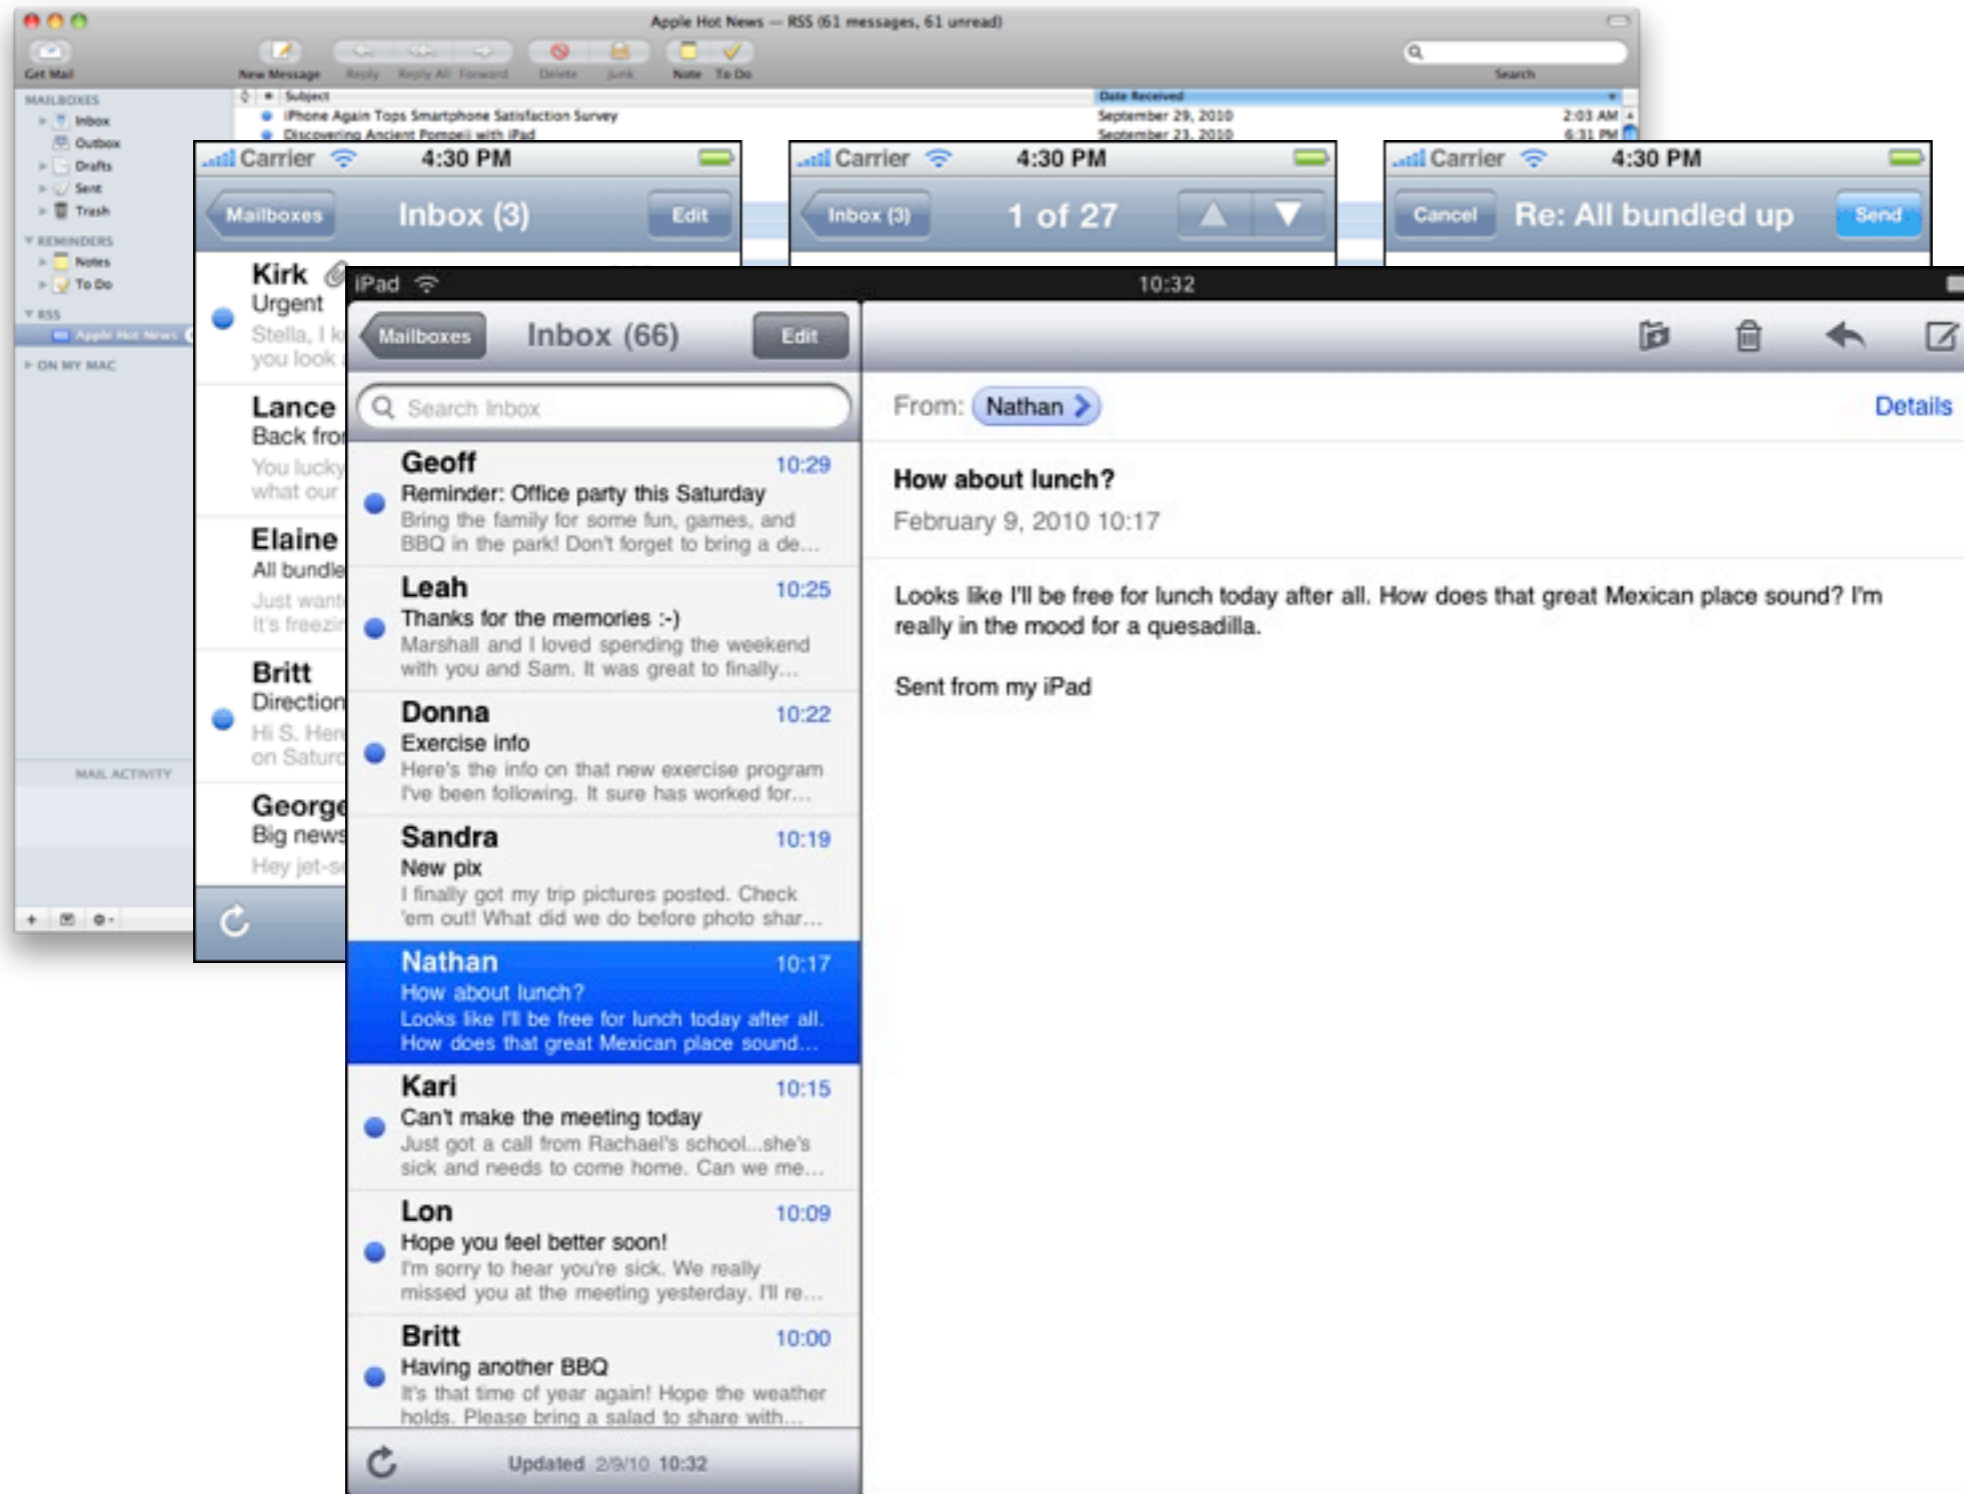

Standard Gestures

	Tap	To press or select a control or item (analogous to a single mouse click).
	Drag	To scroll or pan.
	Flick	To scroll or pan quickly.
	Swipe	In a table-view row, to reveal the Delete button.
	Double tap	To zoom in and center a block of content or an image. To zoom out (if already zoomed in).
	Pinch open	To zoom in.
	Pinch close	To zoom out.
	Touch and hold	In editable text, to display a magnified view for cursor positioning.

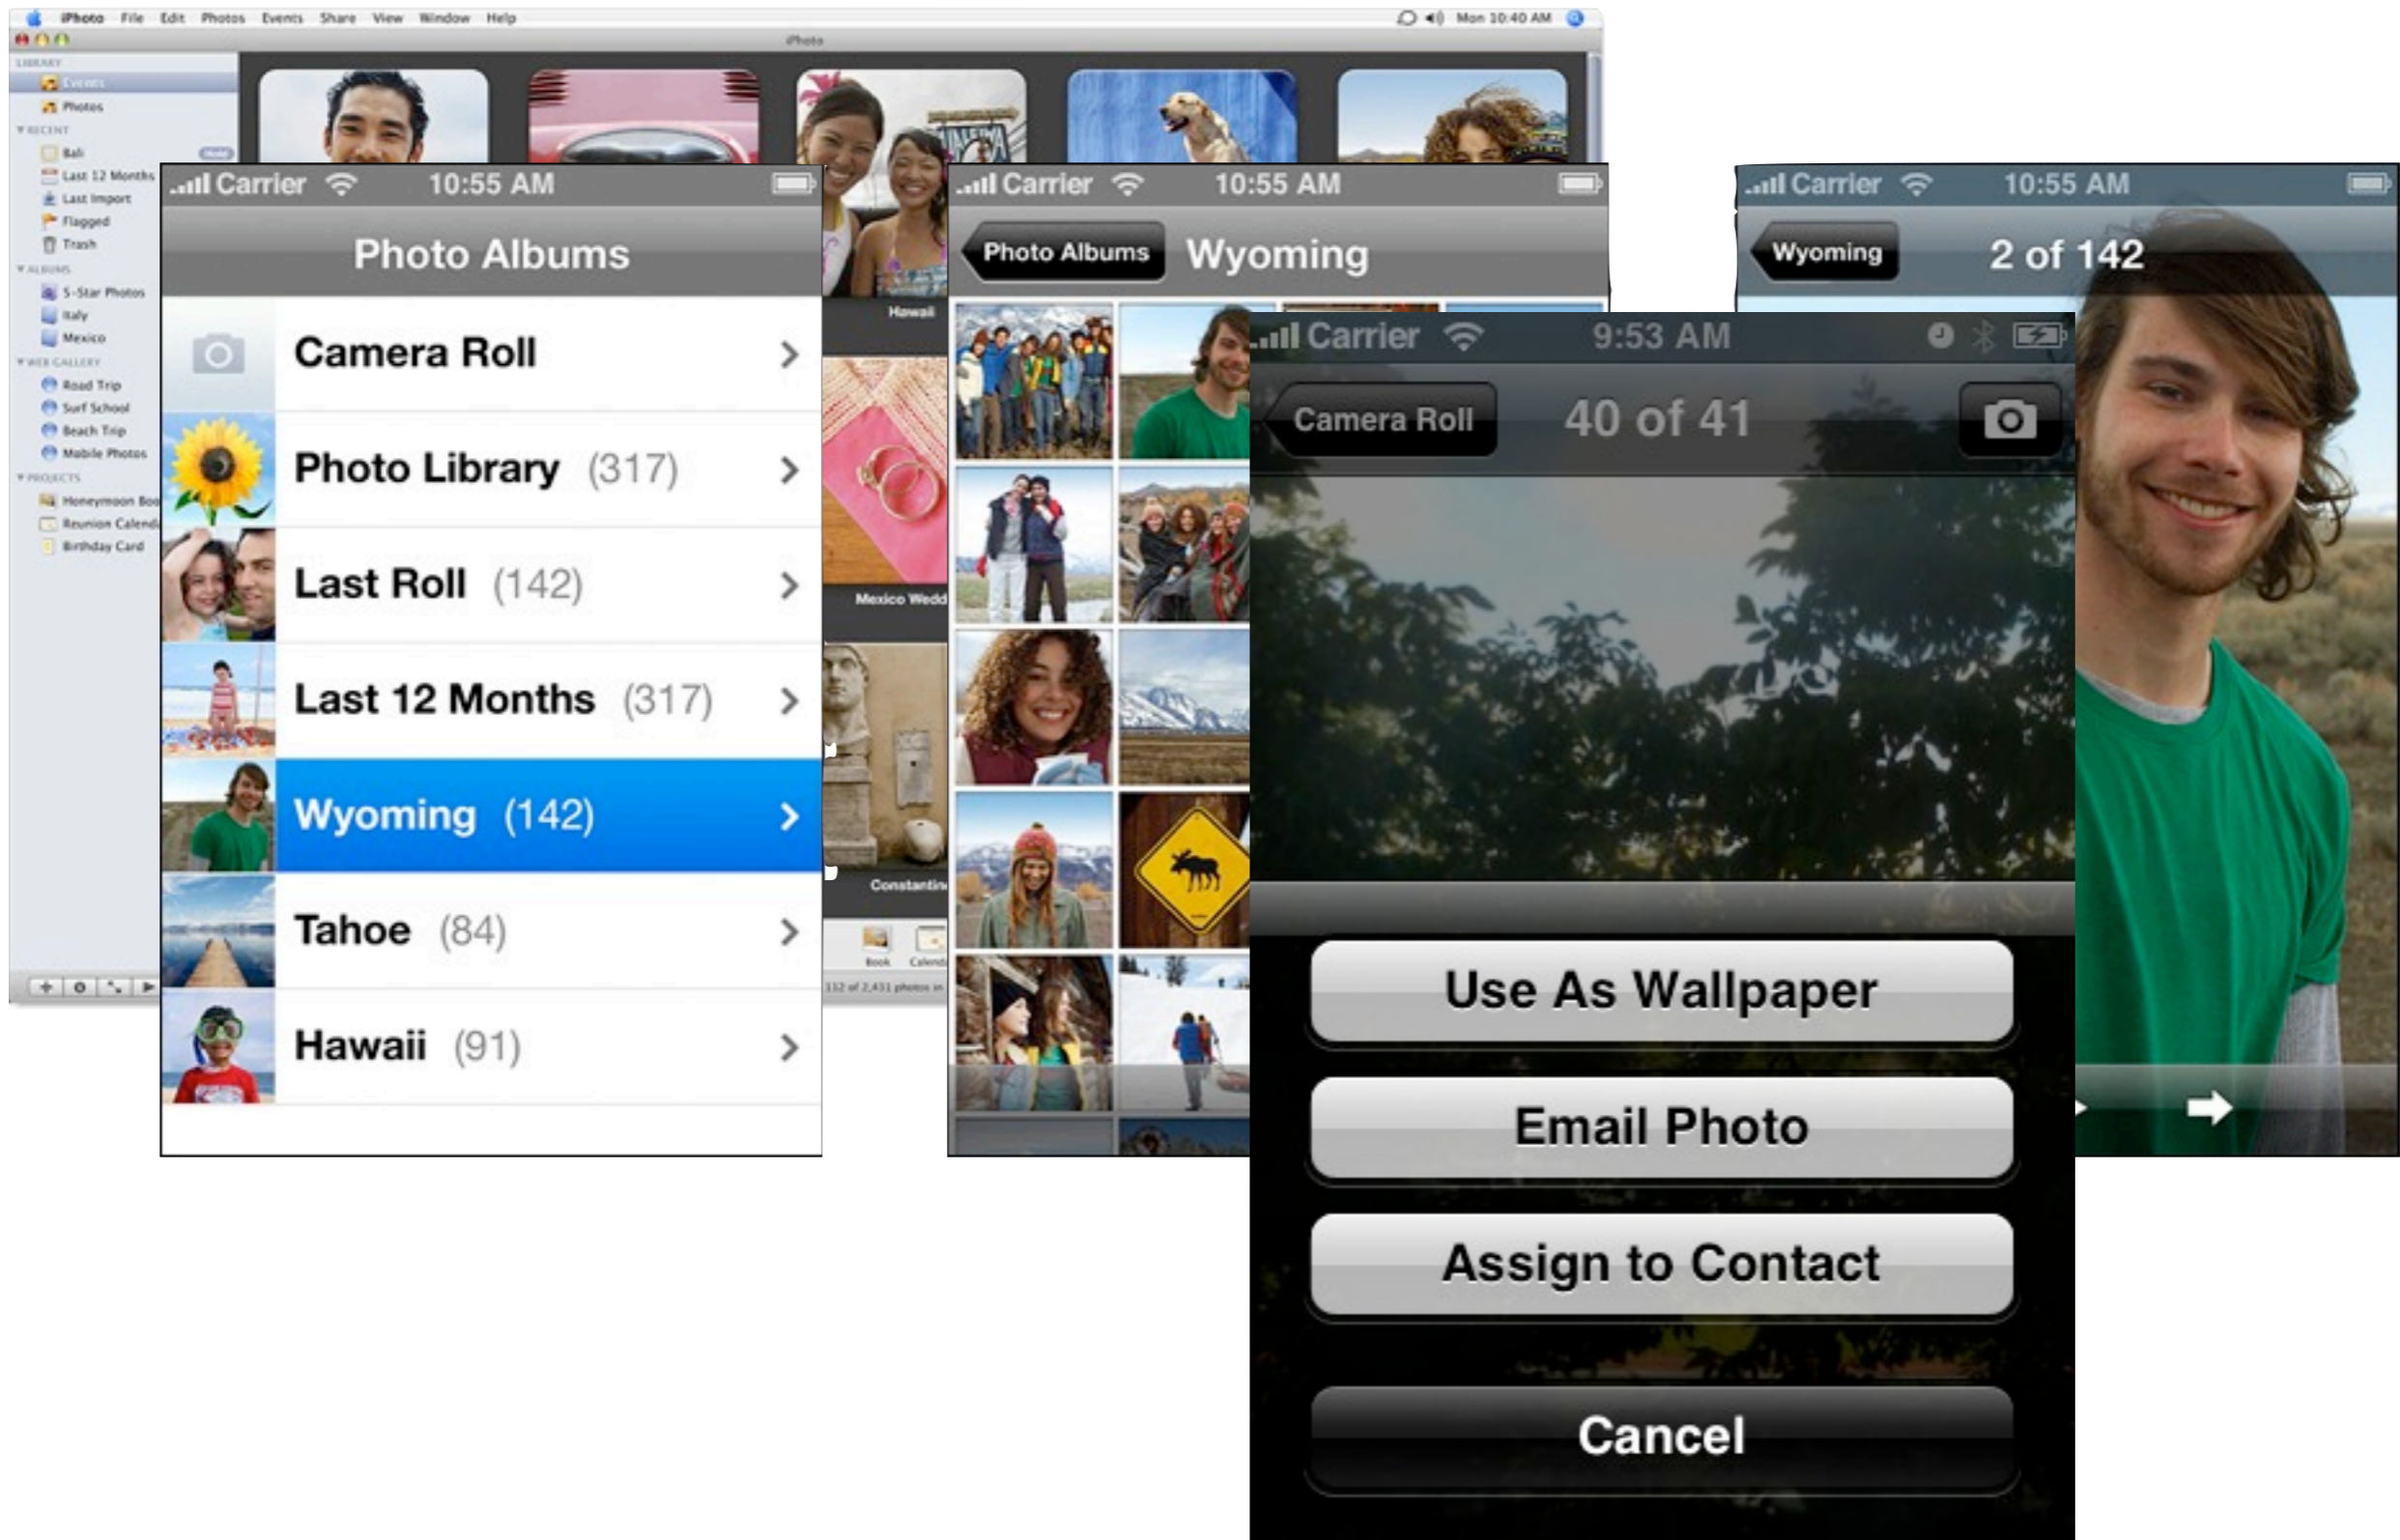

Device Diversity

- Device orientation:
 - Portrait, landscape, upside-down, left or right
- Device resolutions:
 - iPhone: 320x480
 - iPhone 4: 640x960
 - iPad: 1024x768
- Designing for the iPad requires more than increasing the resolution

Example: Mail

iPhoto

Starting

- Apps should start quickly to provide a fluid user experience
- Show a launch image that closely resembles the first screen of your app
- Restore the state of last run
- By default, launch in portrait orientation.

Stopping

- No *Quit* button or menu item
- Be prepared to quit at any time
- Program flow interrupted by external events
 - Incoming phone call
- Store state when stopping
- Application moved to background

Application Styles

Productivity

Utility

Immersive

Photos

Weather

Seadragon

Productivity Applications

- Organizing and managing detailed information
- Often organize data hierarchically
- Organizing the list, add or remove items
- Examples: Contacts, Photos

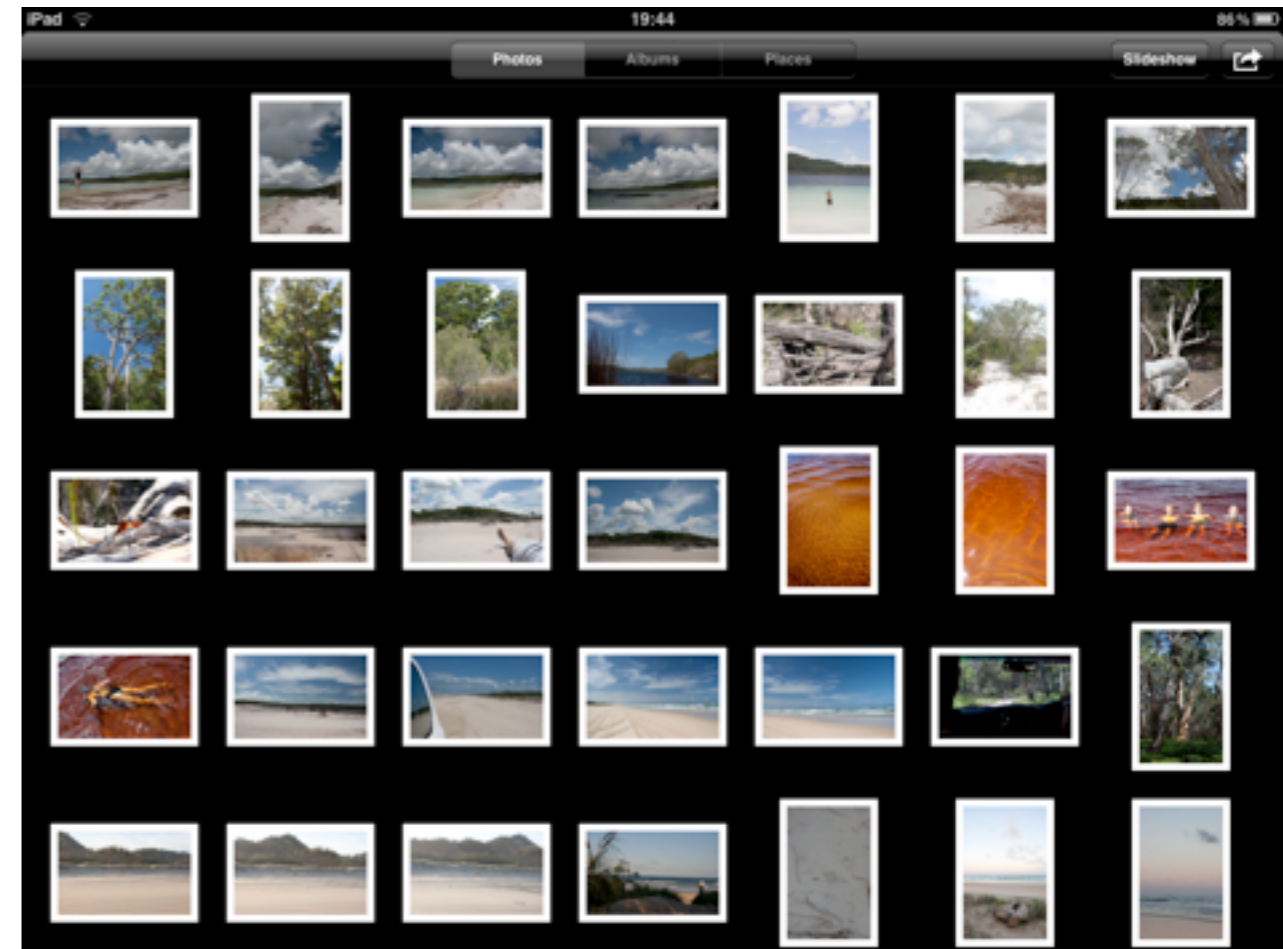

Productivity Applications

Photos

Contacts

Photos

Utility Applications

- Simple task, minimum user input
- Customized, visually attractive UI that enhances the displayed information
- Data is organized in flattened list of items
- Examples: Weather, Stocks

Utility Applications

Weather

Stocks

Elements

Immersive Applications

- Full-screen, visually rich UI
- Focussed on content and user experience
- Tends to hide much of the device's user interface
- Custom navigational methods
- Examples: Living Earth, Carpenter

Immersive Applications

Living Earth

Carpenter

iOS Developer Program

The fastest path from code to customer.

[Enroll Now](#) \$99/year

- 1. Develop**
Develop your application with the iOS SDK and a wealth of technical resources in the iOS Dev Center. [Learn more](#)
- 2. Test**
Test and debug your code on iPad, iPhone and iPod touch to finalize your applications. [Learn more](#)
- 3. Distribute**
Distribute your apps on the App Store and reach millions of iPad, iPhone, and iPod touch users. [Learn more](#)
