Assignment 7
In a group of 2 students, implement an application that is capable of returning the current time of 10 different cities from around the world. It should also support at least two different languages and there should be a menu item to exit the application.
Embed your tip-calculator as second activity to which you can switch by using the menu.
Submit your solution until May 17th, 2011 via email to thues@cs.rwth-aachen.de. Clearly state all names of the students who have worked on the assignment in the email. Before submitting, compress the project and verify that all project files (esp. resources) are included in the archive.
