STAssertAwesome XCTAssertAwesome

Unit testing with Xcode 5

Release checklist

- App does not crash on start
- App is compatible with iOS 6, iOS 5, ...
- App behaves well-defined when internet connection is slow

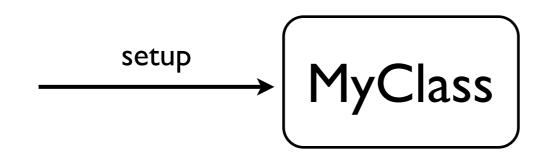

How to automate this?

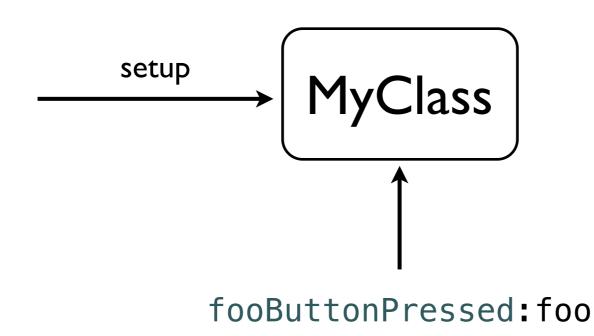

State tests

Demo

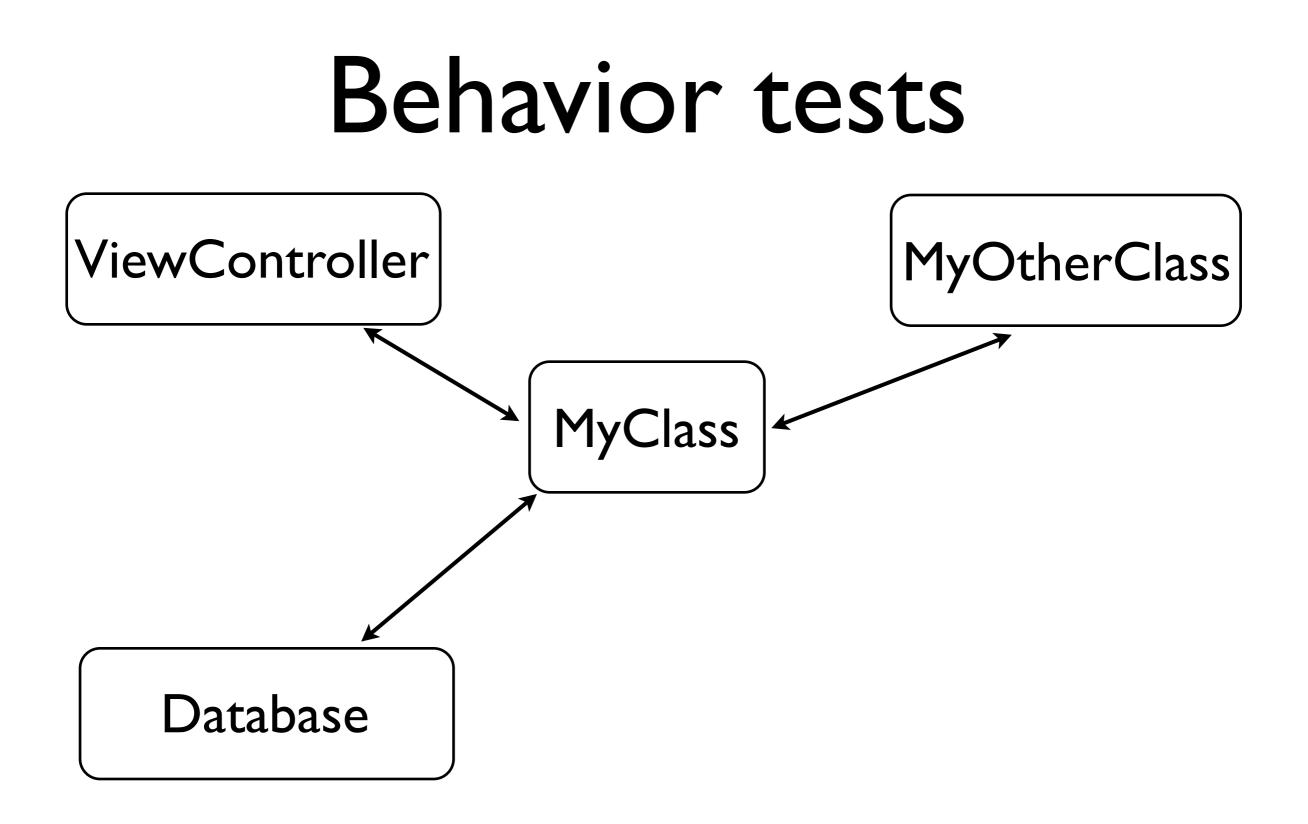

An object is not an island...

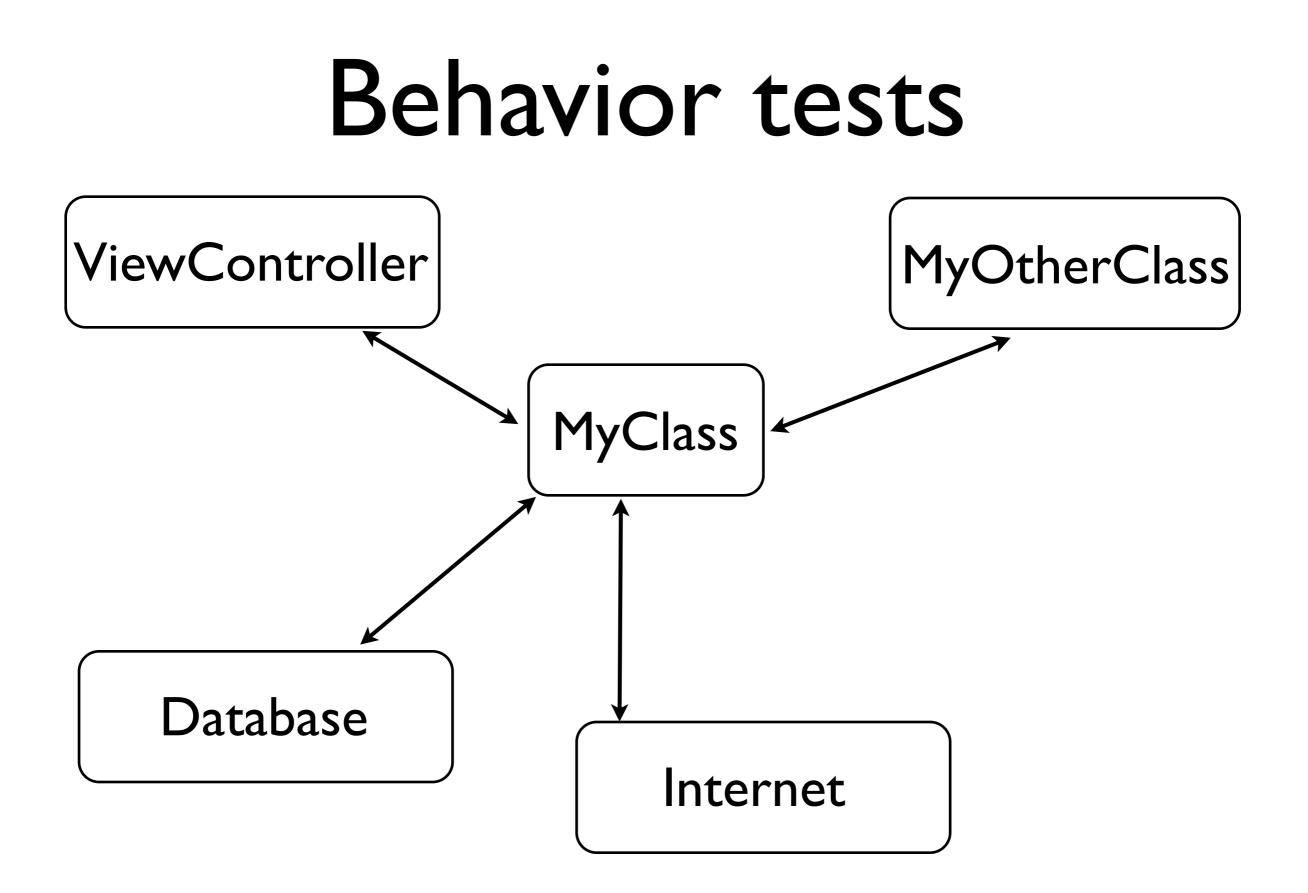

Behavior tests

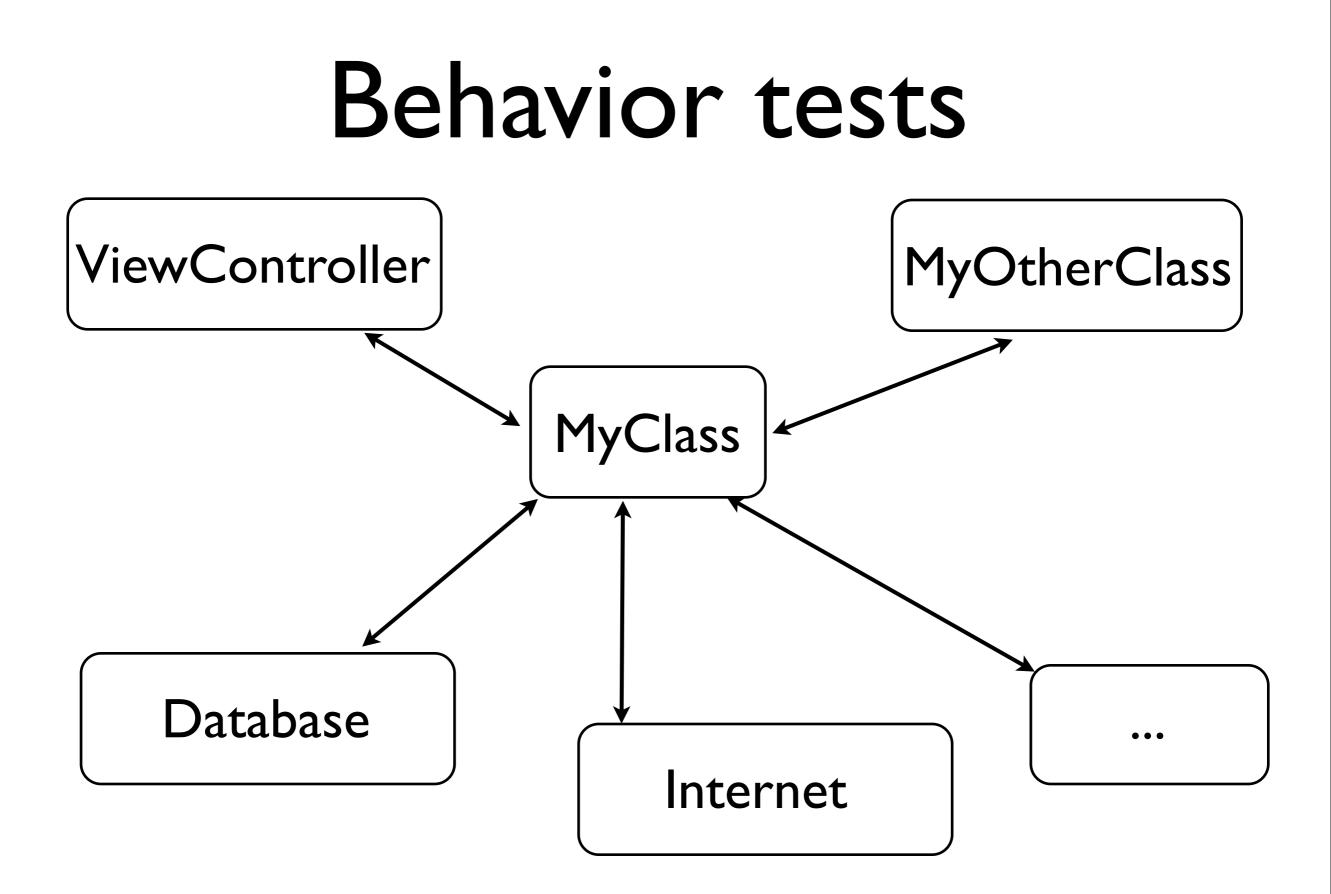

Behavior tests

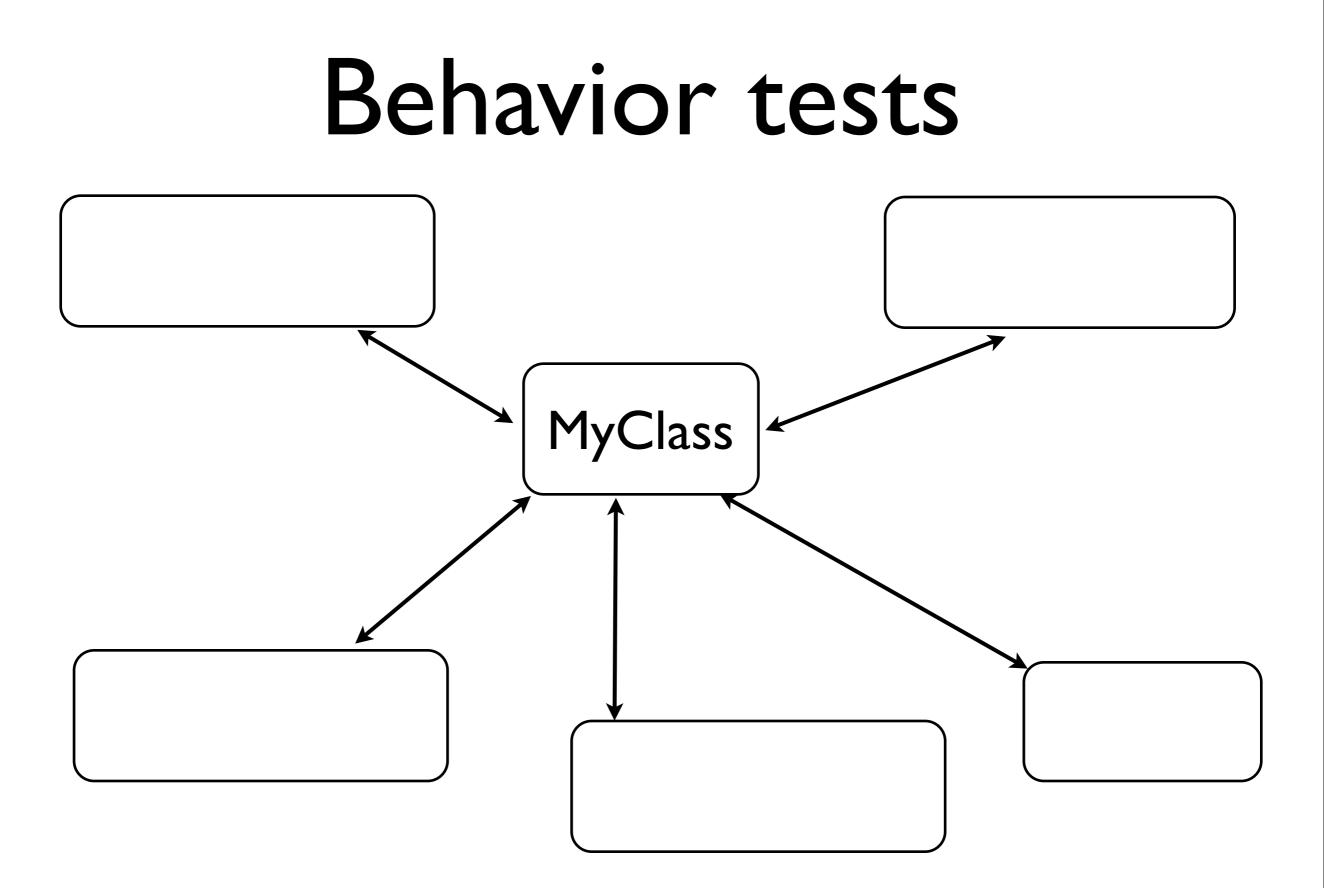

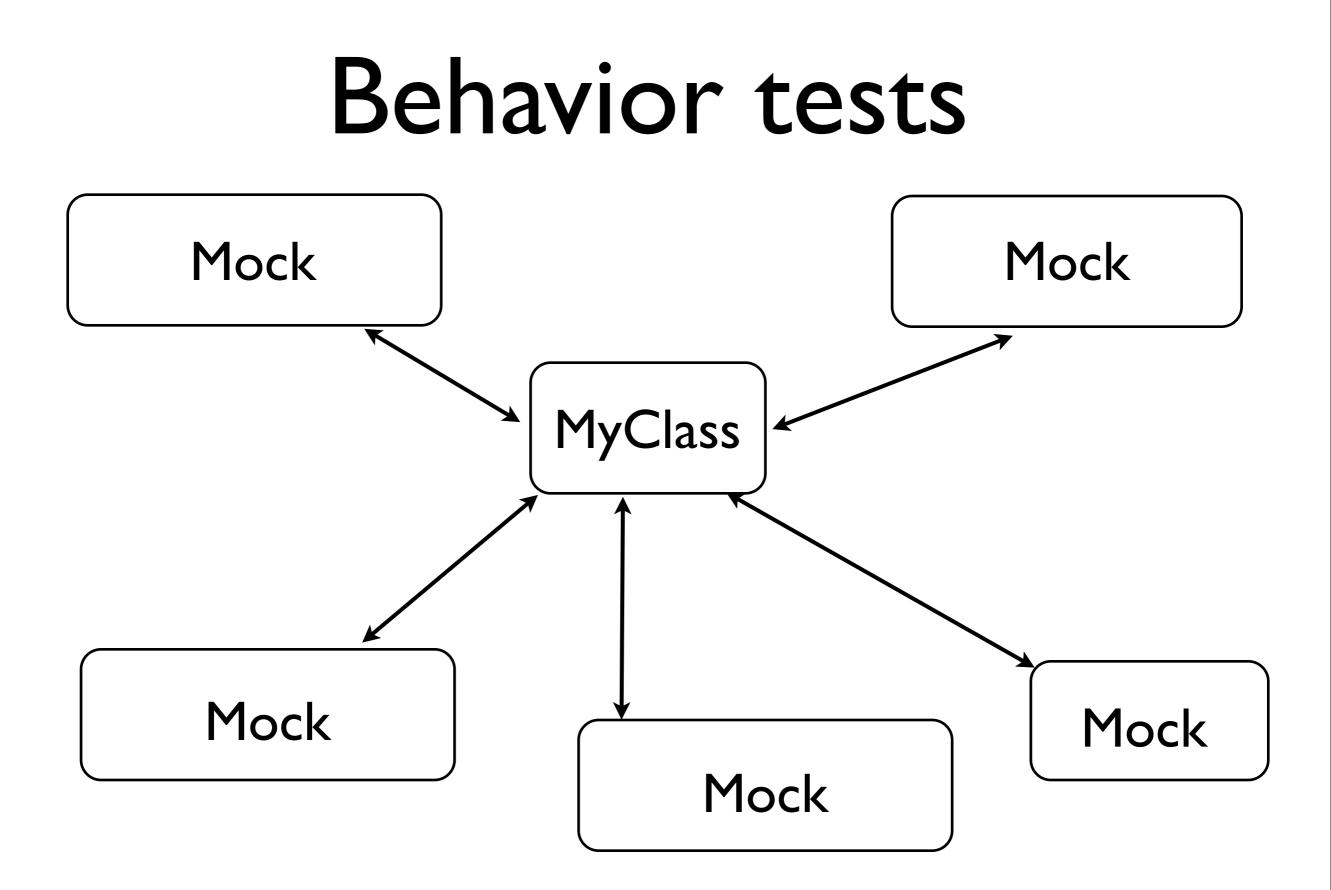

Mock via subclassing

@interface MockMapView : MKMapView
@property(nonatomic, assign) BOOL addOverlaysWasCalled;
@property(nonatomic, retain) NSArray* overlaysAdded;
@end

@implementation MockMapView

```
-(void)addOverlays:(NSArray *)overlays
{
    self.addOverlaysWasCalled = YES;
    self.overlaysAdded = overlays;
    [super addOverlays:overlays];
}
```

@end

Mock via OCMock

NSArray* expectedOverlays = @[...]; id mockMapView = [OCMockObject mockForClass:[MKMapView class]]; [[mockMapView expect] addOverlays:expectedOverlays]; [testClass setMapView:mockMapView];

[testClass doStuffWithMapView];

[mockMapView verify];

- Create a mock
- Tell it what should be called

- Create a mock
- Tell it what should be called
- Set up your class with mock

- Create a mock
- Tell it what should be called
- Set up your class with mock
- Call method under test

- Create a mock
- Tell it what should be called
- Set up your class with mock
- Call method under test
- [mock verify] will throw exception if expectations were not met.

Demo
