# Herman Ahrens

My motivation to attend the FabLabCon Europe 2013:

As consultant I see 3D printing as a breakthrough production technology that in the “traditional” high tech production environment beyond rapid prototyping still is under-exposed.

To be able to change this in my daily praxis I want:

- ❖ To gain knowledge on state of the art 3D printing
- ❖ To be able to give advice based on scientific insights
- ❖ To have the best view what likely future scenario's are
- ❖ To be able to appreciate 3D printing proposals at their real value
