# The Media Computing Group

- New group within the CS department at RWTH Aachen, established Oct. 2003
  - Prof. Jan Borchers (head)
  - Rafael Ballagas, Eric Lee (Ph.D. students)
  - Several undergraduate research assistants
  - Growing to ~8 PhD students in the next few years
  - Also involved in Bonn IT Center (*b-it*)
- Mission: Exploring new ways to interact with ubiquitous media

# Sample research topics

- Fluid interaction with time-based media
  - Interactive music conducting exhibits
  - Creating an interactive multimedia workspace
  - Audio services for ubicomp environments
- Physical interfaces for media interaction
  - The iStuff physical user interface prototyping toolkit
  - Device and metaphor design in interactive rooms
- User interface design patterns
  - New format to disseminate interaction design experience
  - Applied successfully to interactive exhibits (book)
  - Developing into a new research field in Human-Computer Interaction

# Media Space

- 3 main functions:
  - **Testbed** for our research
  - **Everyday** meetings+presentations
  - **Showcase** for visitors
- Part of flexible floor concept for entire group
  - Media Space: displays, disappearing computers
  - Lab: student work areas
    - Fostering small group work activity
  - Office spaces: including electronic whiteboards
  - Completely reconfigurable (hopefully)
    - Mobile walls and furniture

# Sample Project Videos

- At <http://www.actibits.com/>
  - **WorldBeat** award-winning interactive music exhibit for the Ars Electronica Center in Linz (Austria)
  - **Personal Orchestra** public exhibit in the House Of Music Vienna to "Conduct the Vienna Philharmonic"
- At <http://iwork.stanford.edu/photos.shtml#iclub>
  - **iClub**: Students turning the Stanford Interactive Workspace into a dance club

# Floor Architecture

By 4/2004:  
110 m<sup>2</sup> here  
+ 110qm elsewhere

By 2006: 400 m<sup>2</sup> here

Mobile & foldable desks  
and computer trolleys

# Lab Architecture

Coffee corner

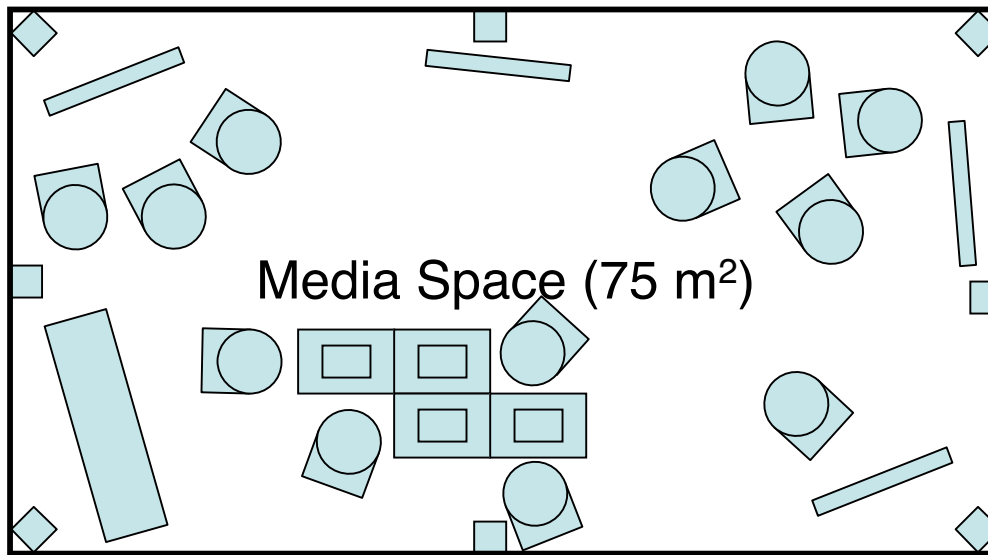

Lab (100 m<sup>2</sup>)

Small group cells for 4  
with interactive wall display

Print&scan,  
hardware bench

# Media Space Architecture

Mobile wall displays

Personal chairs — with battery power?

Sample use:  
8 mobile displays for 360° video project

# Flexible floor design issues

- Raised floor, sub-floor satellite connection nodes & individual floor boxes
- Noise control
- Storage space
- Controllable daylight
- Remote control of all technology

# Equipment

- Final state
  - 30–40 Power Macintosh G5 PCs, 2 Xserve Servers
  - 15 group displays
    - e.g., SMART 40" LCDs (or Totoku 9 MPix LCDs?)
  - 5–10 tablets
  - Videoconferencing, surround audio service
  - Gbit Ethernet, 802.11g wireless
  - Lots of cams, mikes, custom UI hardware
- ~500k€ total for lab startup
