

## Funded PhD Positions in Human-Computer Interaction

We do research in **HCI beyond the desktop**, from interaction with audio and video, to physical computing and personal fabrication, to mobile devices, ubicomp and pervasive games, to tables and interactive workspaces, to HCI design patterns. Since starting in 2003, we've become Germany's leading HCI group in terms of archival CHI publications (see <http://hci.rwth-aachen.de/chi-ranking>).

**We have several PhD student openings in our group starting in 2013 or 2014.** Our positions are fully funded for at least 3 years. We're looking for outstanding students with a degree in CS or a related discipline and a prior background in HCI who are willing to work in a fun international team. You'll be part of our research projects and teaching activities (we teach in English). We've had PhD students and postdocs join us from Stanford and Georgia Tech, for example.

We're part of the CS Department at RWTH Aachen University, a University of Technology with 30,000 students, one of Germany's nine Excellence Universities, and #1 in funding from DFG, the German National Science Foundation.

You can usually meet us at CHI or UIST, where we'll be happy to answer any questions you may have: What do PhD students do at RWTH? What is living in Aachen like? Will I get along with English only? Will I have to eat Bratwurst for three years?

Check out our web site, and drop me an email if you're interested!

— Prof. Dr. Jan Borchers ([borchers@cs.rwth-aachen.de](mailto:borchers@cs.rwth-aachen.de))
