Personal Fabrication (Fabbing)

- Personal, digital fabrication of goods
- Personalizable to individual needs unlike mass-market products
- Largely missed by corporate world until now
Lasercutter
If you're looking for a CNC solution for production that delivers high performance, high volume, speed and reliable power for all cutting tasks, ShopBot’s PRSalpha series of full-sized gantry tools will be your system of choice. With enough production capability for a three-shift factory, ShopBot PRSalpha tools are our toughest, most sophisticated, gantry-based CNC routers. Using advanced technology for CNC cutting, drilling, carving and machining, the PRSalpha series tools deliver rapid transit speeds of 1800 inches per minute and cutting speeds of up to 600 inches per minute. Easy to configure and re-configure, learn and use, the PRSalpha CNC delivers affordable, full-production performance in digital fabrication of wood, plastic, aluminum, and other materials.

Traditional shop-size and larger.

ShopBot builds CNC gantry tools in many sizes to suit the varying needs of manufacturers: 96 x 48, 96 x 60, 120 x 60, 144 x 60. Give us a call to discuss your production needs. We'll help you to choose the right tool to get the job done.

Call to order your Full Size Shopbot CNC router.  888-680-4466

Four Stages

• Fab 1.0: Expensive digital machines on dumb materials
• Fab 2.0: Easily replicated machines that make (MTM)
• Fab 3.0, 4.0: Smart, self-arranging (replicating?) materials
Physical Literacy

• Correcting historical error ("liberal arts" excluded making stuff)

• Reunite arts and artisans, creator and consumer

The Law

1. You can't infringe trademarks
2. You can't forge (pass off)
3. You can't make copyright figurines
4. You can't include copyright artwork
5. You can't sell patented items
6. You can pretty much do anything else...

Lego Compatible Disc Buttons

How do you make a great idea like Makerbot-printable (clothing) buttons better?

Why, make them Lego Compatible! Naturally.

Update 2009/10/04: In the design files, the knobs are 5mm in diameter. I remeasured my source Lego disc after getting back some Shapeways test prints and the Lego knobs are actually closer to 4.8mm in diameter. I lucked out with my MakerBot-printed buttons; shrinkage brought them down to about 4.9mm in diameter. The Shapeways printed versions are more accurate, 5.00mm diameter, +/- 0.05mm. There's enough give in the plastic materials for them to still fit 'regulation size' Lego blocks, but the metal one was simply too wide a diameter.

Update 2009/11/07: I've been playing around with OpenSCAD (http://www.openscad.org/) and came up with the attached DiscButton_20091107 variation. I even added bottom "sockets" to this variation. It's almost too easy when it's all code!

Disclaimer: LEGO is a trademark of the LEGO Group and these explorations are in no way associated with LEGO Group. Heck! The files are CC-licensed; nothing to stop them embracing and extending it themselves if they so chose! :-(

Make awesome stuff.
Flat is boring. Capture your world in 3D with free Autodesk 123D apps.

Meet the 123D Apps

123D
Design stuff you really want to make, send it straight to a 3D printer.

123D Catch
Automatically convert ordinary photos into extraordinary 3D models.

123D Sculpt
Shape and paint digital clay into amazing 3D sculptures on your iPad.

123D Make
Transform 3D models into a pattern for assembling real artful creations.
