

LiteraturePen - *Analyzing Content Evolution in Literature Sciences*

The goal of the project is to develop a system that digitally captures the writings of an author, especially notes and preliminary editions of the final work.

Depending on your background you will focus on some of these aspects:

- Develop the capturing system
- Conduct the user study
- Write a visualization tool
- Interpret data

This thesis will be done in cooperation with the *Brain, Concept, Writing* group headed by Prof. Karin Herrmann, which is part of HumTec.

You:

- are interested in literature sciences and in generation of texts especially
- have heard some of our lectures
- have programming skills in Objective C or are willing to acquire them
- speak German or English fluently

And now?

- send an email with cover letter, short CV, and grade transcript to
