

Dark Mode vs. Light Mode:

Does Display Choice increase Code Reading Speed with Syntax Highlighting for Novice Programmers?

Motivation

- Previous research did not take syntax highlighting into account
- Research code readability and learning effectiveness
- Find best display mode to help beginners learn to code

Related Work

Sethi et al. (Ergonomics, 2023) and *Palmén et al. (CHI, 2023)* show that Light Mode is better:

- Typing on virtual keyboards is faster in Light Mode
- Reading Text Speed is faster in Light Mode

However, *Shrestha et al. (2024)* have shown that students tend to prefer Dark Mode

- Visual fatigue is lower according to self-reports

Research Aim

Does display mode (Light vs. Dark) affect code reading speed and programming comprehension for novice programmers?

Hypotheses:

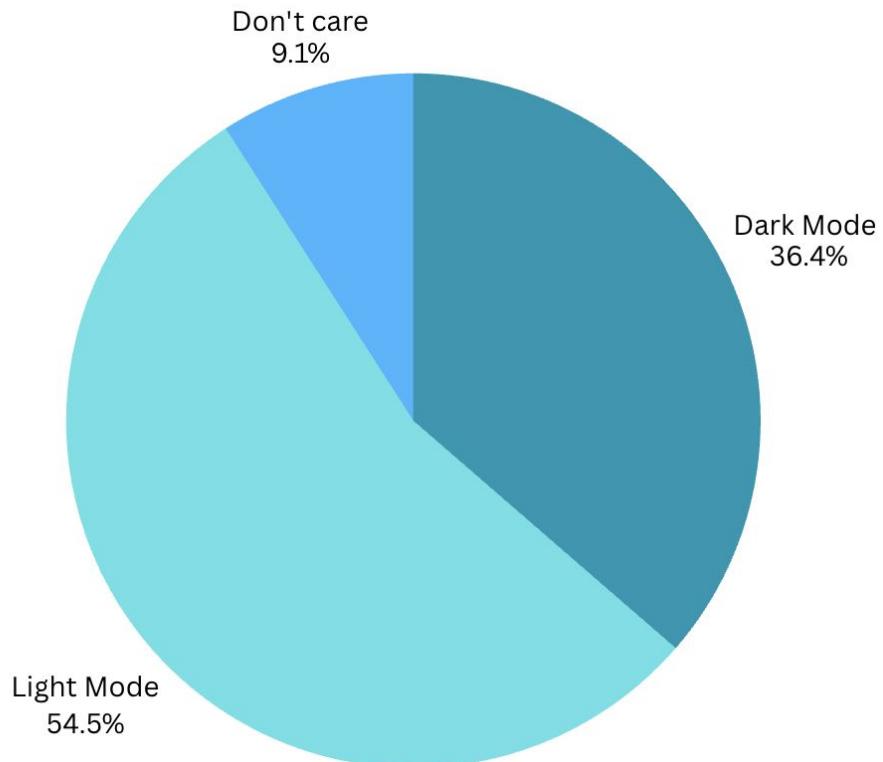

H_0 : The display mode has no effect on the speed for reading code for novice programmers.

H_1 : There is a difference between the speeds of Light and Dark Mode when reading code for novice programmers.

Methodology: Step 1 - Participants

- N = 12 (7 Female, 5 Male)
- Age 17-38
- Almost all participants were programming novices

Mode Preference before:

Methodology: Step 2 - Read, Understand & Practice

Need to teach novice participants so they understand basic code

- C code crash course
 - Integer and float variables
 - If-else statements
- Two pieces of sample code as warm up

Participants rated the crash course positively.

Methodology: Step 3 - Tasks

Within-group Design

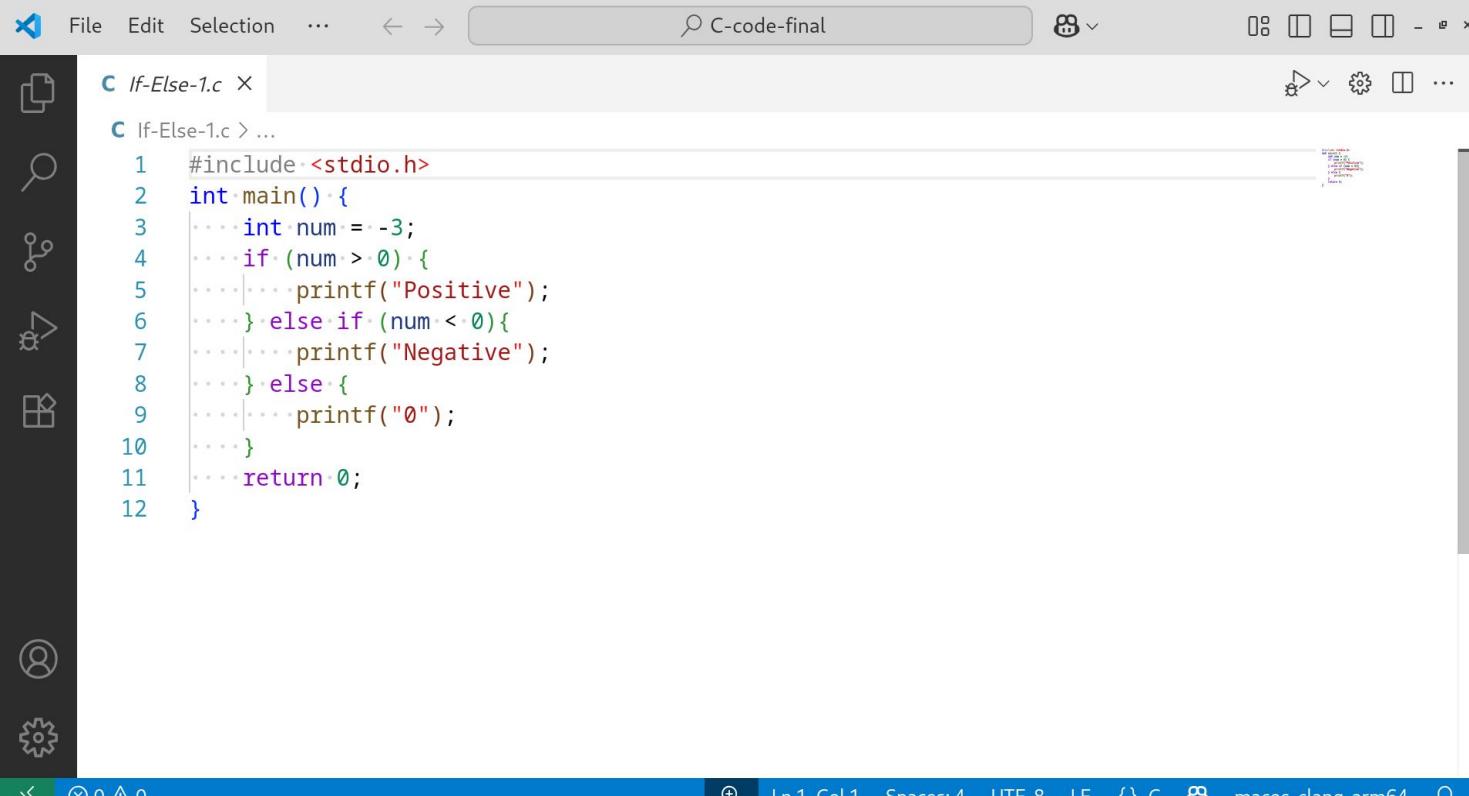

→ Participants read code in both modes

Independent Variable

→ Code in both Light and Dark Mode (VSCode)

Dependent Variable

Methodology: Step 3 - Tasks

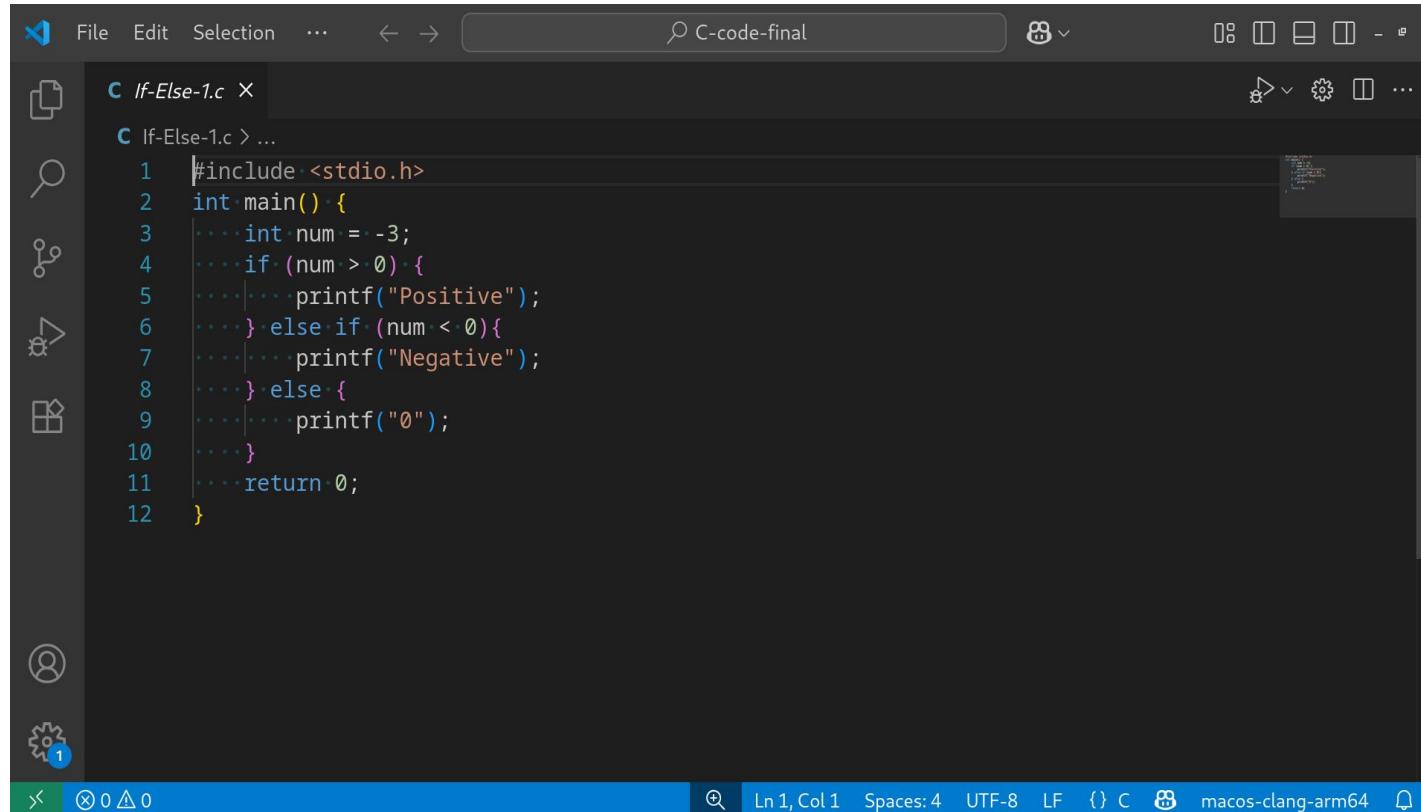

The image shows a screenshot of a code editor interface. The title bar reads "C-code-final". The left sidebar has a dark theme with icons for file operations, search, and other tools. The main editor area shows a C program named "If-Else-1.c". The code is as follows:

```
1 #include <stdio.h>
2 int main() {
3     int num = -3;
4     if (num > 0) {
5         printf("Positive");
6     } else if (num < 0) {
7         printf("Negative");
8     } else {
9         printf("0");
10    }
11 }
12 }
```

The code editor includes a status bar at the bottom with information like "Ln 1, Col 1", "Spaces: 4", "UTF-8", "LF", and "macos-clang-arm64".

Methodology: Step 3 - Tasks

The image shows a screenshot of a code editor with a dark theme. The title bar reads "File Edit Selection ... ⏪ ⏪ 🔍 C-code-final". The left sidebar has icons for file operations, search, and other tools. The main area shows a C program named "If-Else-1.c". The code is as follows:

```
#include <stdio.h>
int main(){
    int num = -3;
    if (num > 0){
        printf("Positive");
    } else if (num < 0){
        printf("Negative");
    } else {
        printf("0");
    }
    return 0;
}
```

The status bar at the bottom shows "Ln 1, Col 1" and "Spaces: 4".

Methodology: Step 3 - Tasks

Within-group Design

→ Participants read code in both modes

Independent Variable

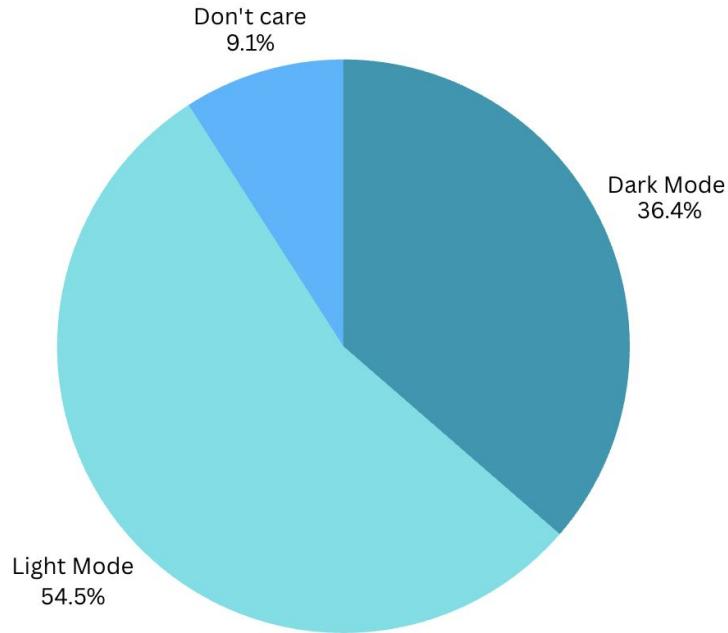

→ Code in both Light and Dark Mode (VSCode)

Dependent Variable

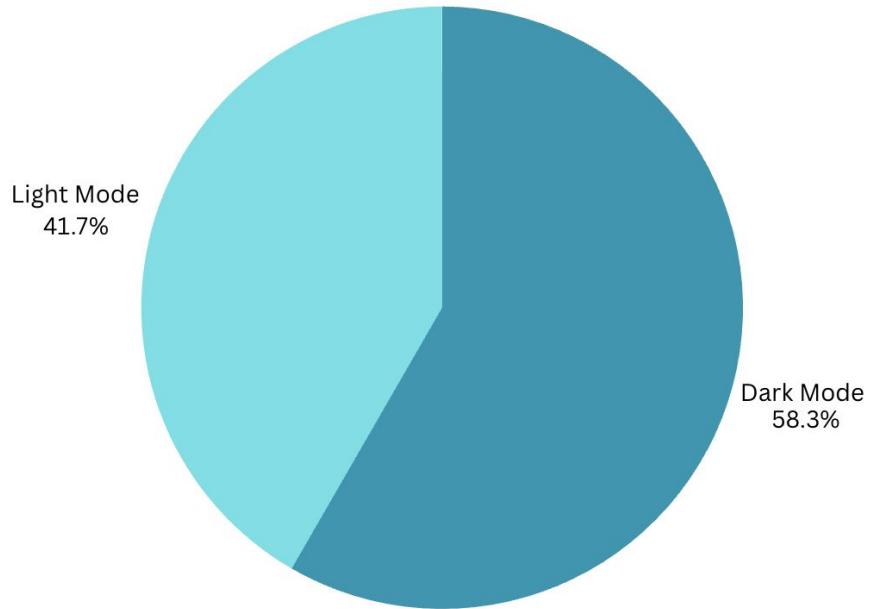

→ Time to find certain integers, floats or if-branches

Results: Data

Mode Preference before:

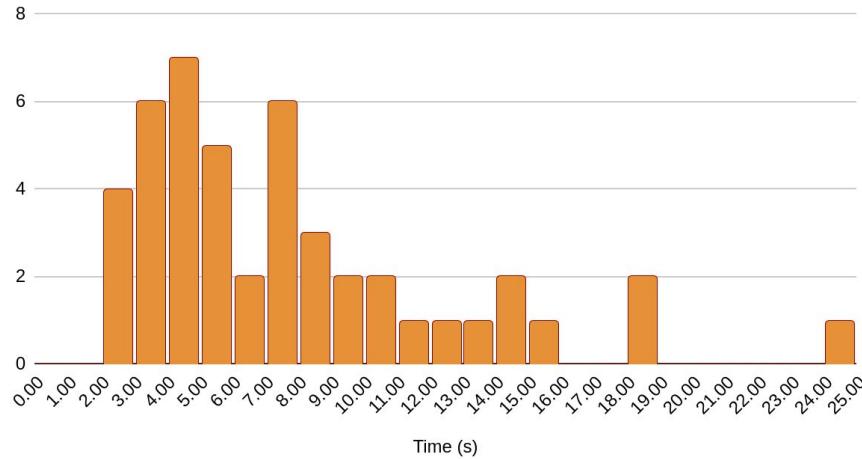

Mode Preference after:

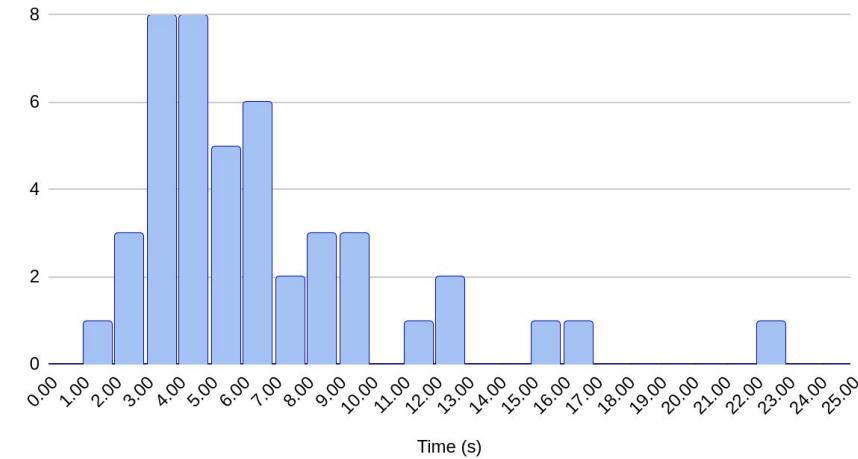

Results: Data

Histogram of Time needed for Light mode

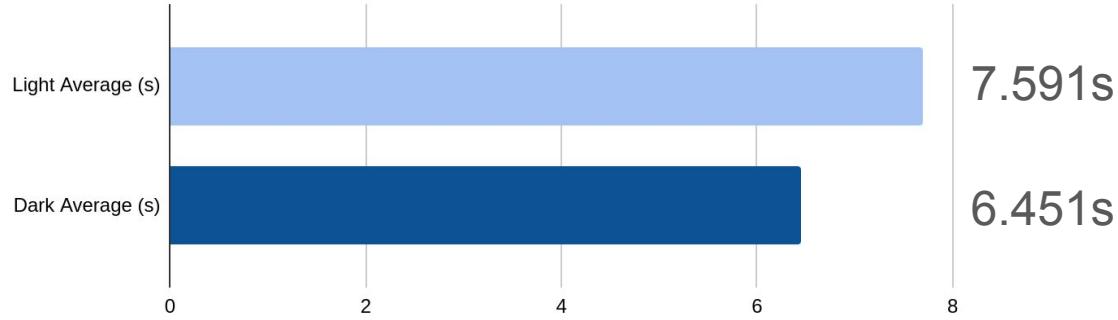

Histogram of Time needed for Dark mode

Results: Data

Average time needed:

p-value = 0.238

→ Can't reject H_0 !

There is no significant difference between the task completion time in both display modes.

Discussion

No statistically significant differences were found

- **However**, on average the speed of Dark Mode was still faster
- Participants rated Dark Mode as more comfortable

As such it is unlikely that Light Mode poses an advantage when reading code.

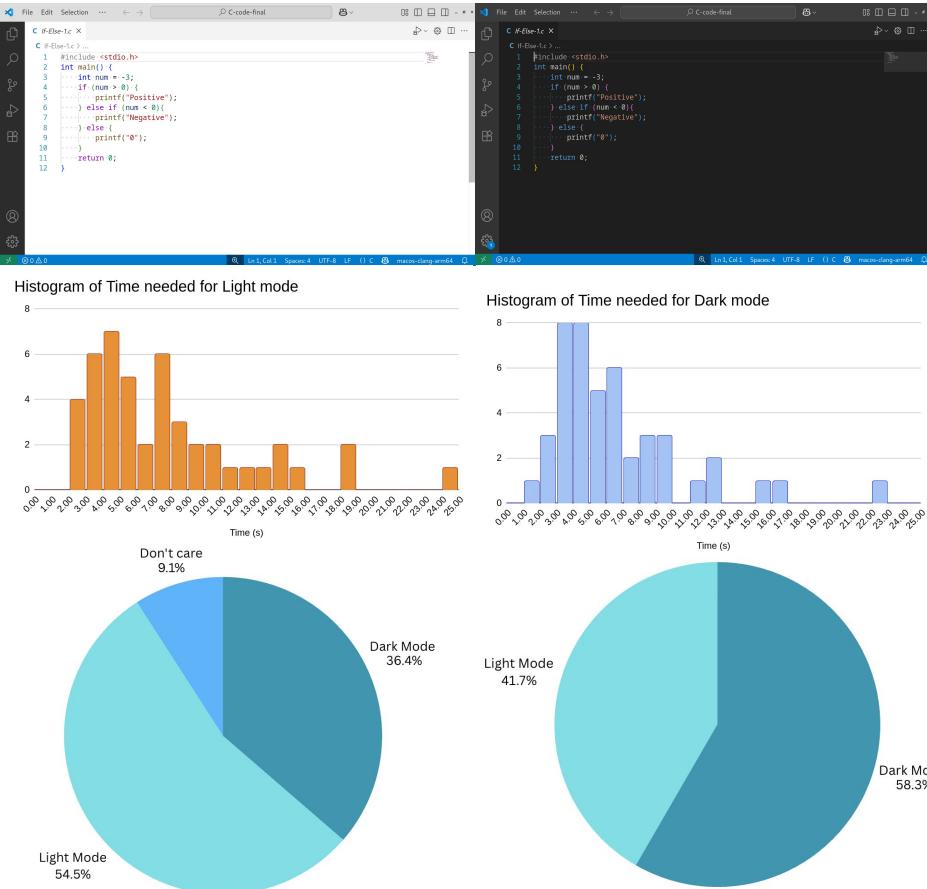

- This is **in contrast to previous research** focusing on monochrome text
- Dark mode's bright syntax enhances visibility and focus.

Perhaps, Dark Mode can help novices learn programming better.

- Further research is needed

Summary

- Previous research suggests Light Mode is better for productivity
- Participants who were novices in programming were recruited
- A C crash course was given to teach basic programming concepts
- On average, Dark Mode was faster
 - But no statistically significant effects were found
- Participants rated Dark Mode as being more comfortable
- These results are in contrast to previous research
